The EXP is an experimental deck that has been field tested by the team for several months. It features a DAYGLO coating process over the entire deck. When the graphic and grip tape is added, the rails of the deck have a glowing appearance. This produces an edge to the board that is clearly defined when skating and aids in foot placement. An additional plus noted by the team in the research and development of the EXP is the DAYGLO coating makes the deck slide faster than traditional clear coated wood decks. The deck is available in three DAYGLO colors, green (shown), orange and yellow.
